

Enterprise Knowledge Management

What it is and how to do it

Doug Kalish

Why KM has a lousy reputation...

To be useful, KM has to:

- cross functional boundaries
- engage the largest community
- capture and link to the broadest knowledgebase
- improve business process

To be successful, KM has to:

- be departmental
- address a targeted audience
- collect and index limited assets
- not require behavioral change

Submitted By

Chas Watkins

Week Of

10/8/99

Summary

Had our Evolve meeting to discuss connectors.

Gave Greg Rountree and Peter Wisnovsky draft of Tempo/Evolve connector requirements. There are still issues to be reviewed and we will be meeting with Jennifer Marshall today to discuss allowable updates from Tempo (specifically for positions with assigned or reserved resources). Need to understand further on how the connectors will work when projects are sent from Tempo to Servicesphere. Greg will coordinate a meeting for next week to get more detail from Peter Wisnovsky and for me to walkthru Tempo with Peter. There are still issues with including the recruiting pipeline (candidates who have accepted offers and start dates). We need to understand what will be used to track these resources (only the candidate ID exists, and when candidate becomes an employee, the switch to an employee ID is made). Jaime will be involving Lori in this discussion (to be scheduled next week).

Use of the knowledge determines the view

The Intranet, Extranet, and Website represent different levels of access, not different databases

A value chain approach allows you to find potential for leverage

- Examine the value chain of your organization
- Find the chokepoints
- Evaluate whether KM can make a difference
- Sign up the stakeholders in advance

Work backwards from the **tasks** most frequently performed by users:

- Find a person
- Get help on a particular technology or product
- Learn about a particular business or industry topic
- Get up to speed on an ongoing project
- Staff an engagement
- Answer a question regarding company policies and procedures
- Learn about a client, target, competitor, or vendor

Understand the **flows of knowledge** in the organization

LEVERAGE

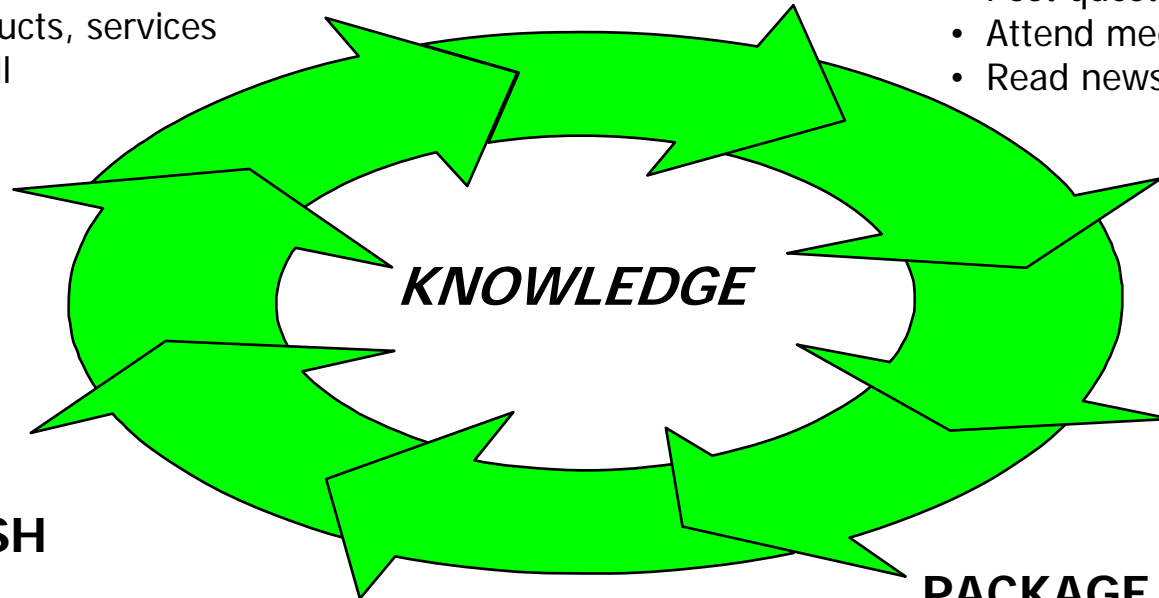

- Create new products, services
- Cross-sell, up-sell
- Build brand

CREATE

- Learn from customers, training
- Identify best practices
- Perform internal research

COLLECT

- Post questions to discussions
- Attend meetings/seminars
- Read news

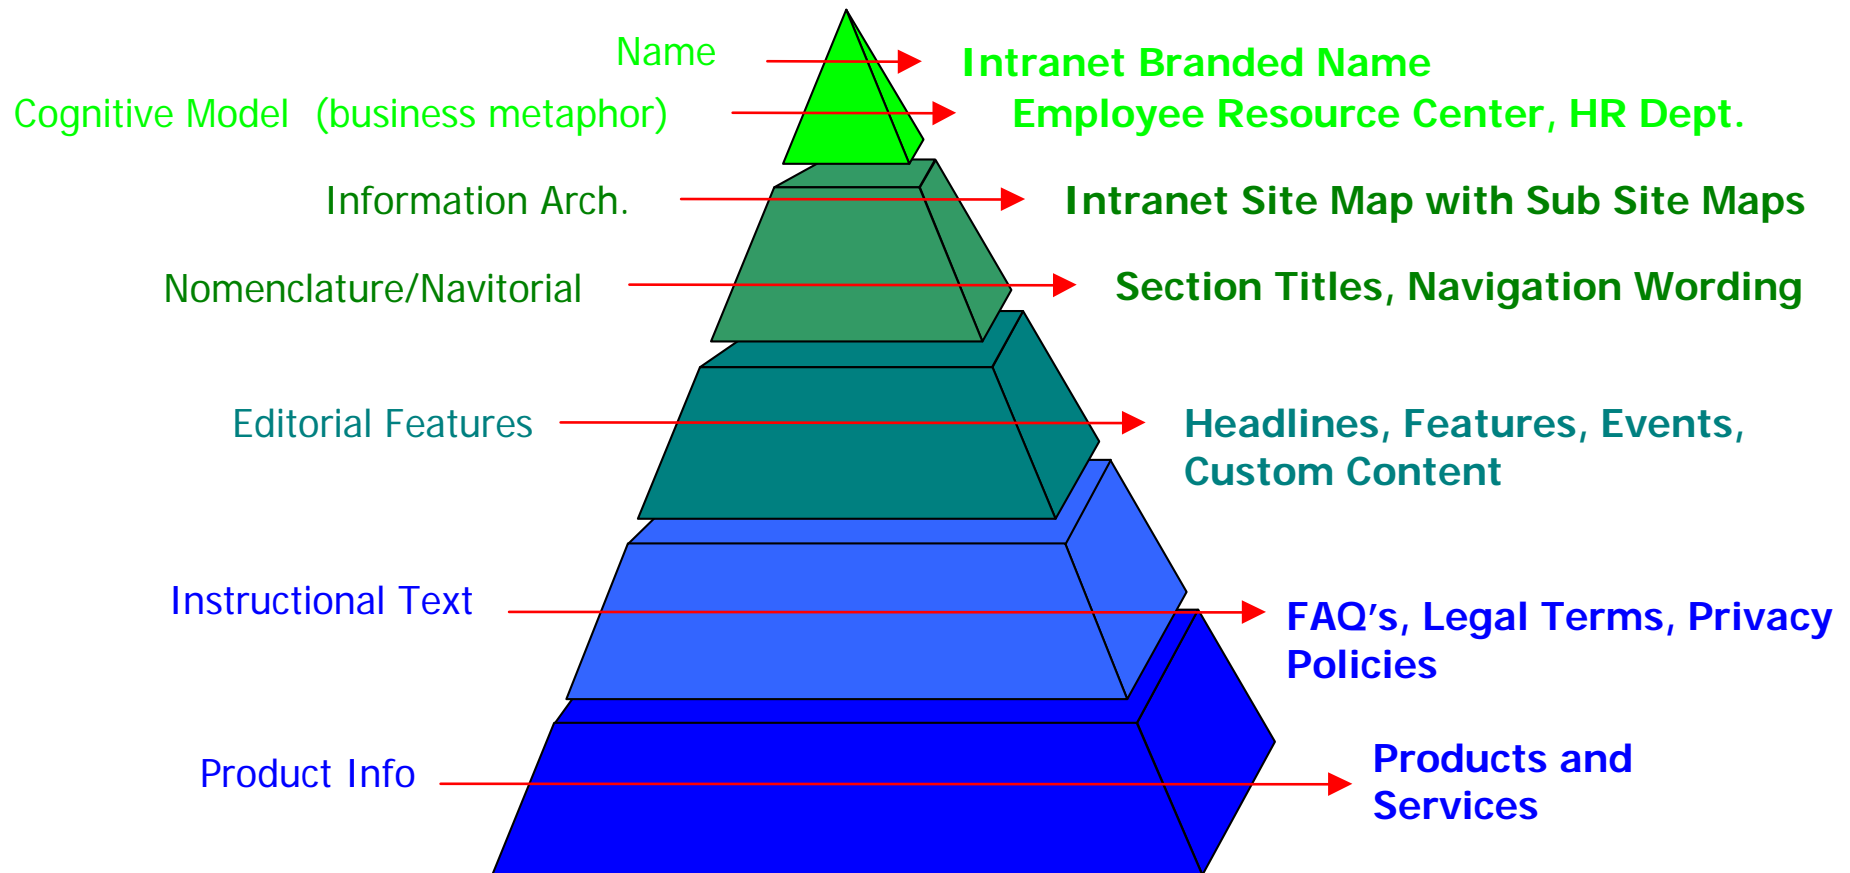

PUBLISH

- E-mail
- Learning materials
- Call center/help desk
- Intranet
- Extranet/Public site

PACKAGE

- Analyze data
- Categorize information
- Refine taxonomy/vocabulary
- Ensure consistent formats

Build a **content strategy** for both casual and frequent users

An applications strategy integrates multiple technologies

Building a hyperportal

Search

Full-text intranet search

Metadata-enabled search

Skills search

Mail and local data search

Multimedia search

Team support

Threaded discussions

Group scheduling

Shared whiteboards

Annotation

Collaborative filtering

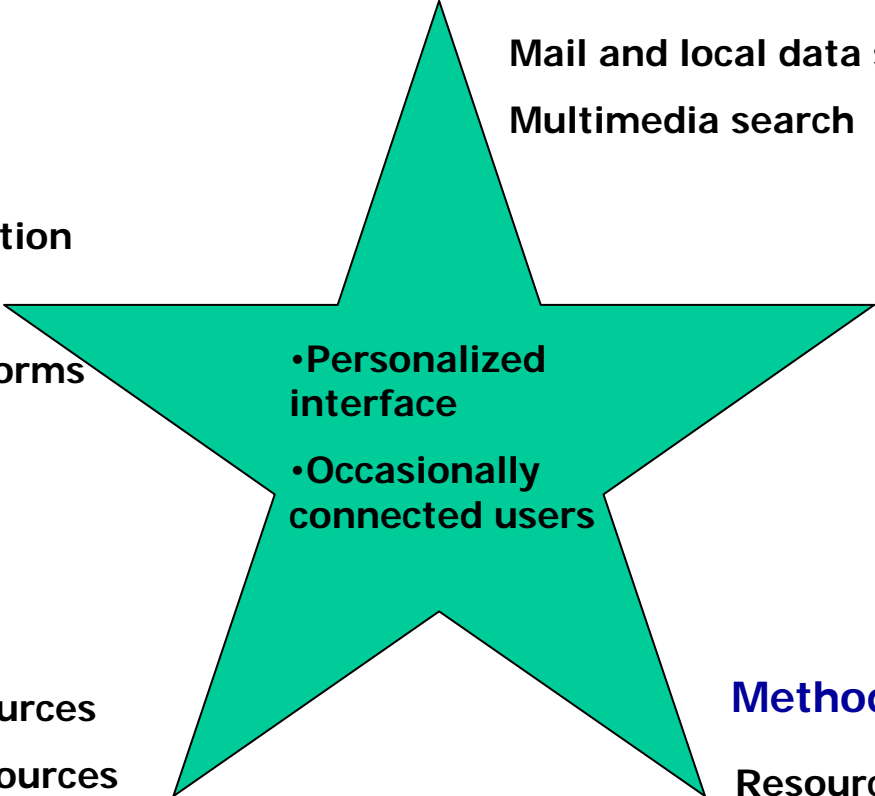

Methodology support

Resources on Intranet

Project management

Workflow support

Database support

- 
- Personalized interface
 - Occasionally connected users

Subscription

Change notification

Customizable frequency

Customized form of notification

Routing to groups

Delivery over multiple platforms

Repository

Sample documents

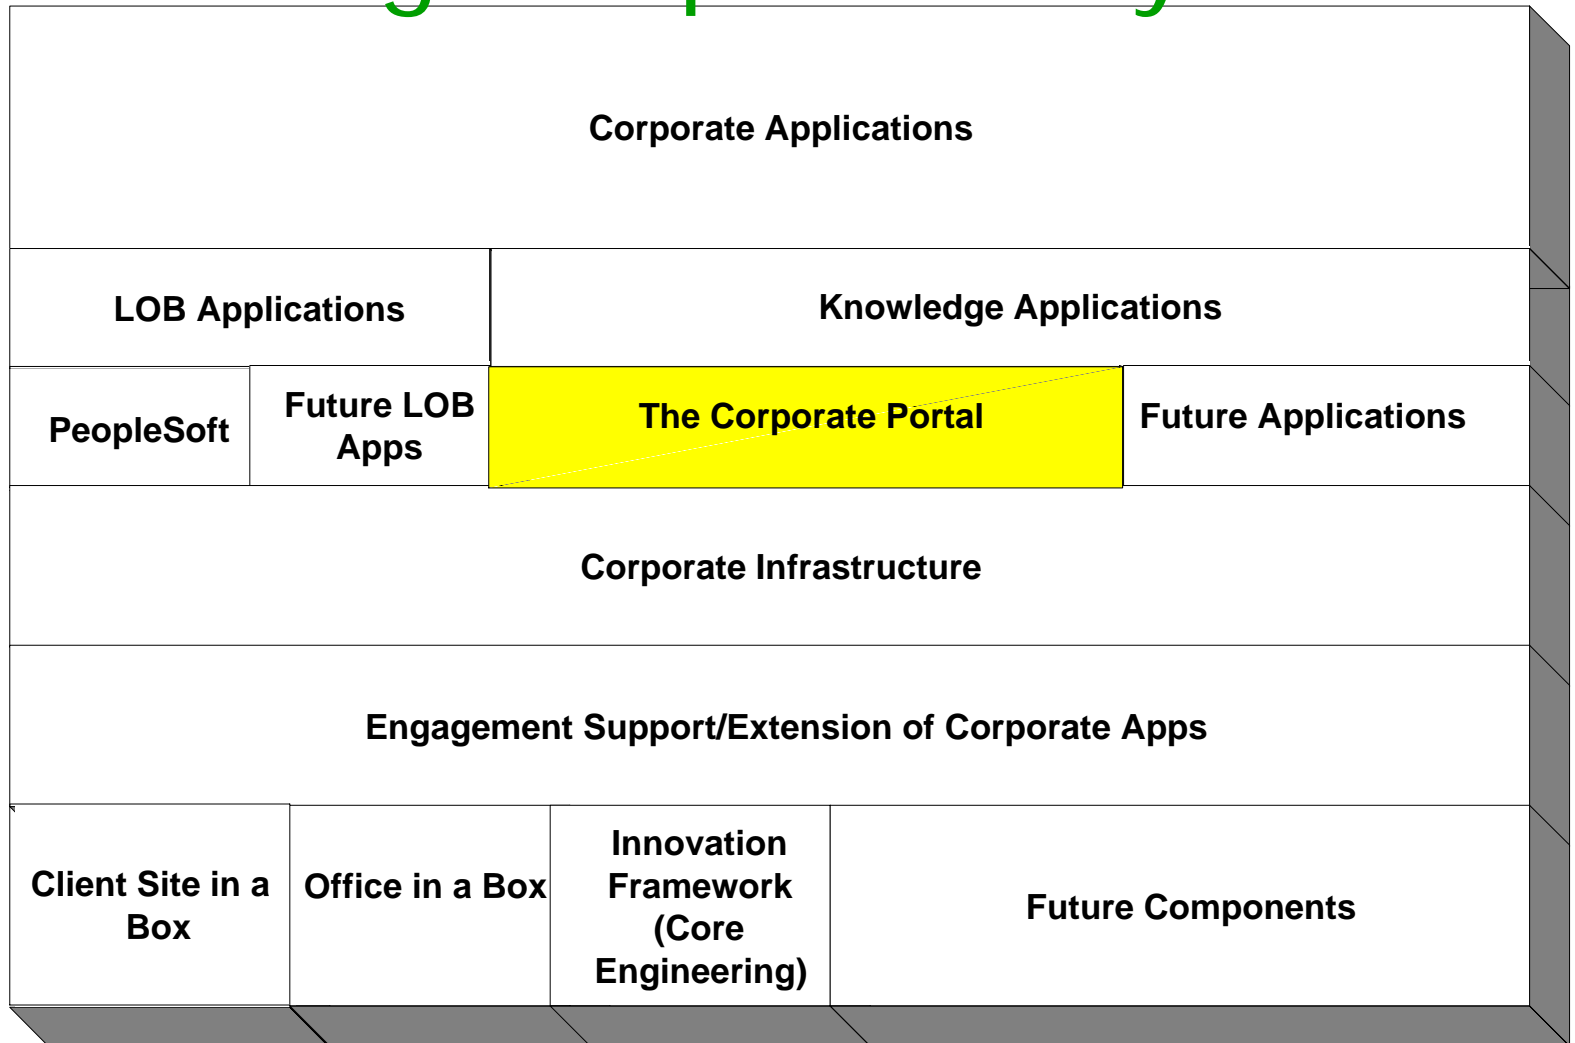

Internal training resources

External knowledge sources

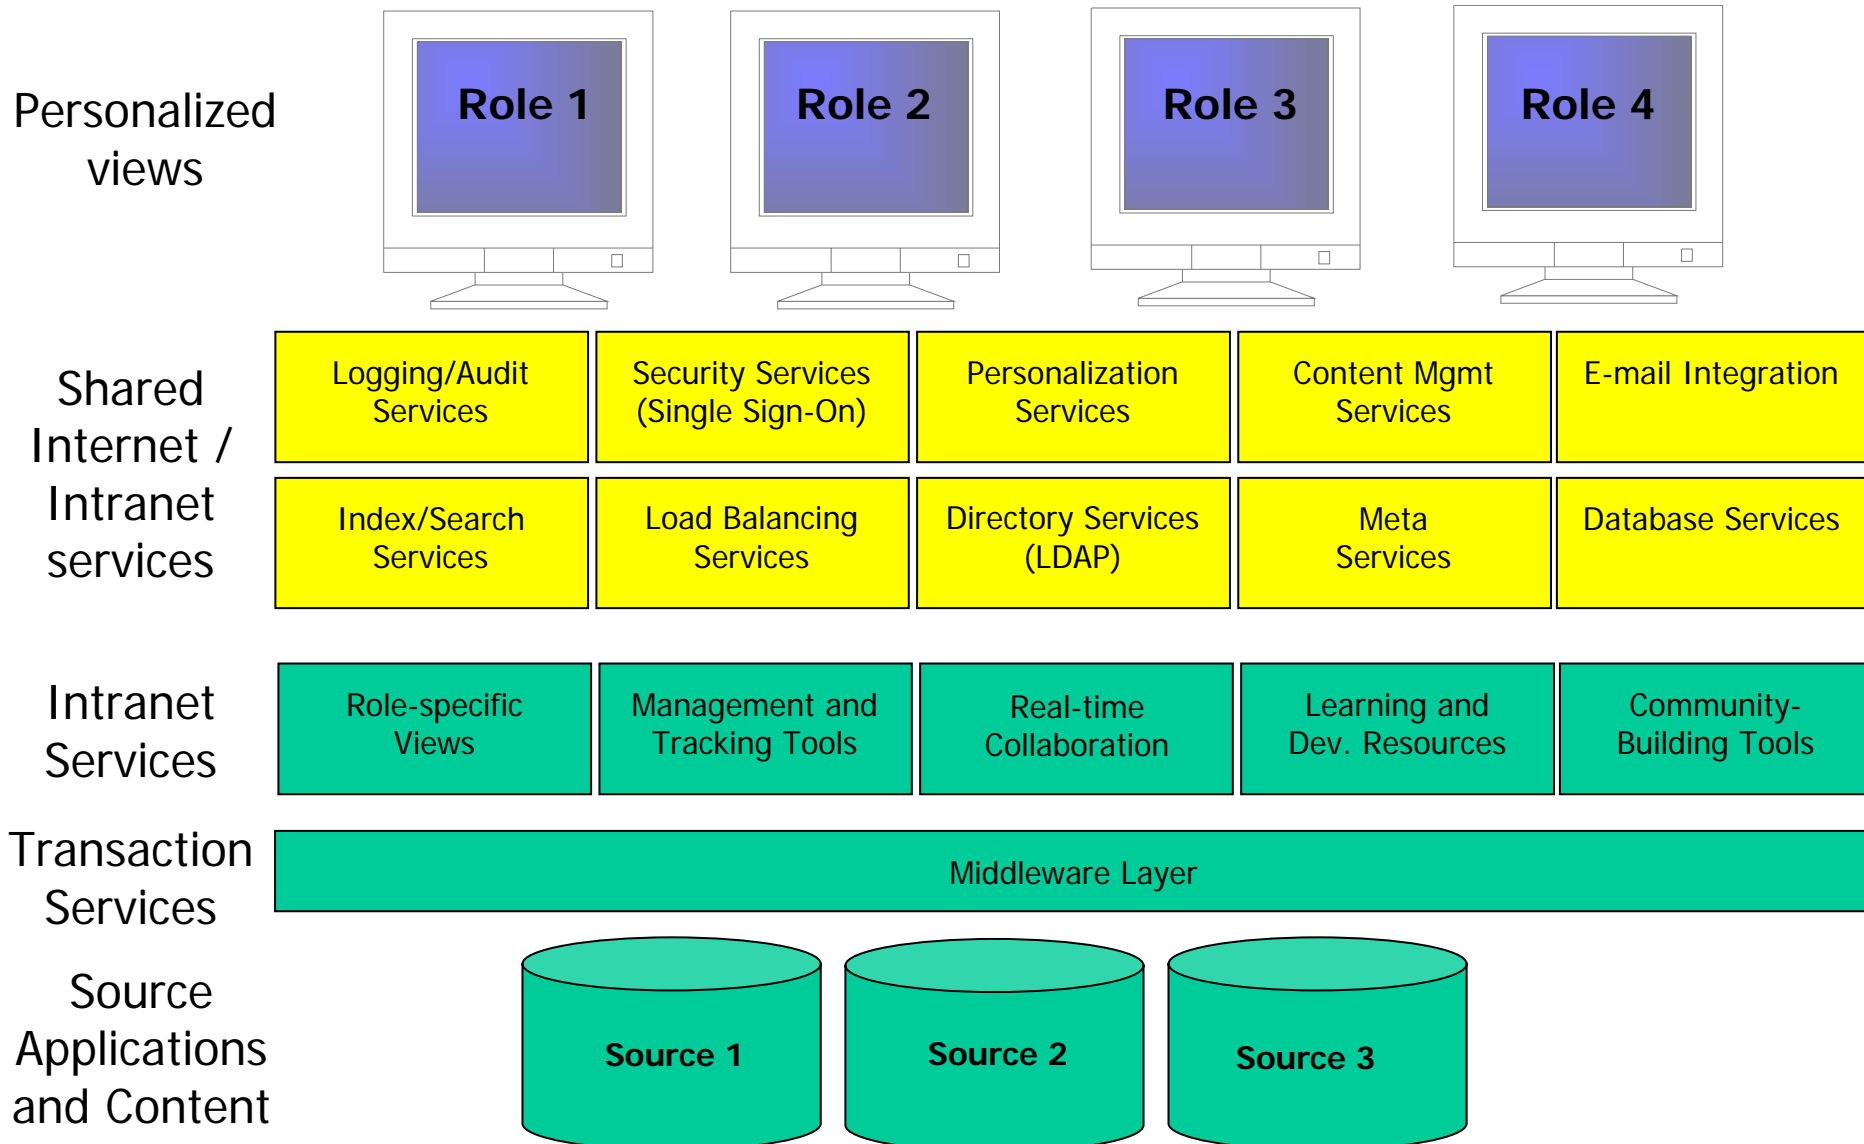

Document management

Integration with imaging/OCR

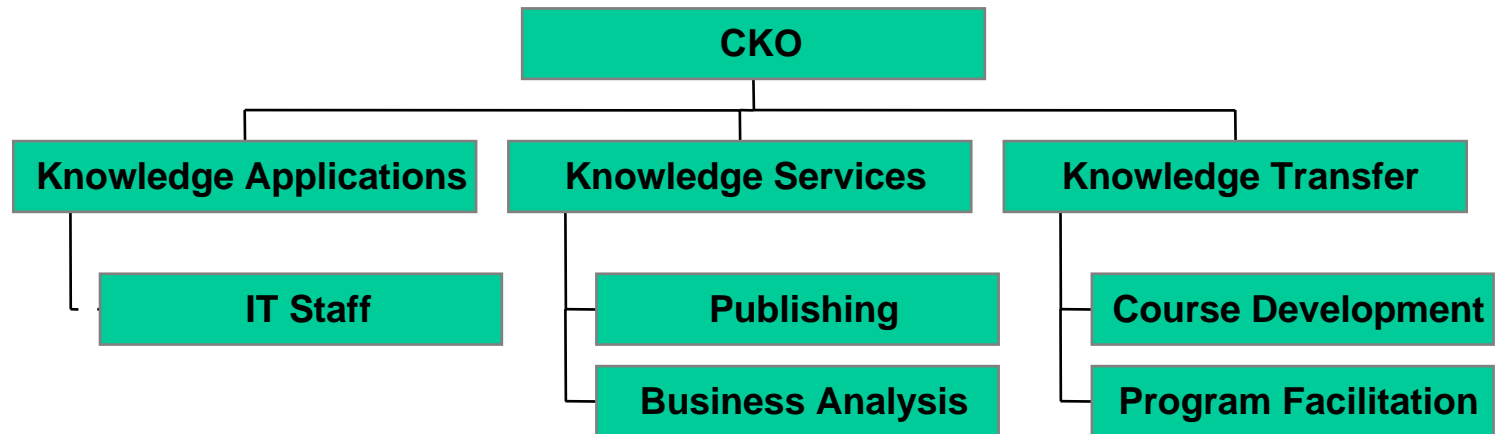

Identify points of integration with pre-existing and planned systems

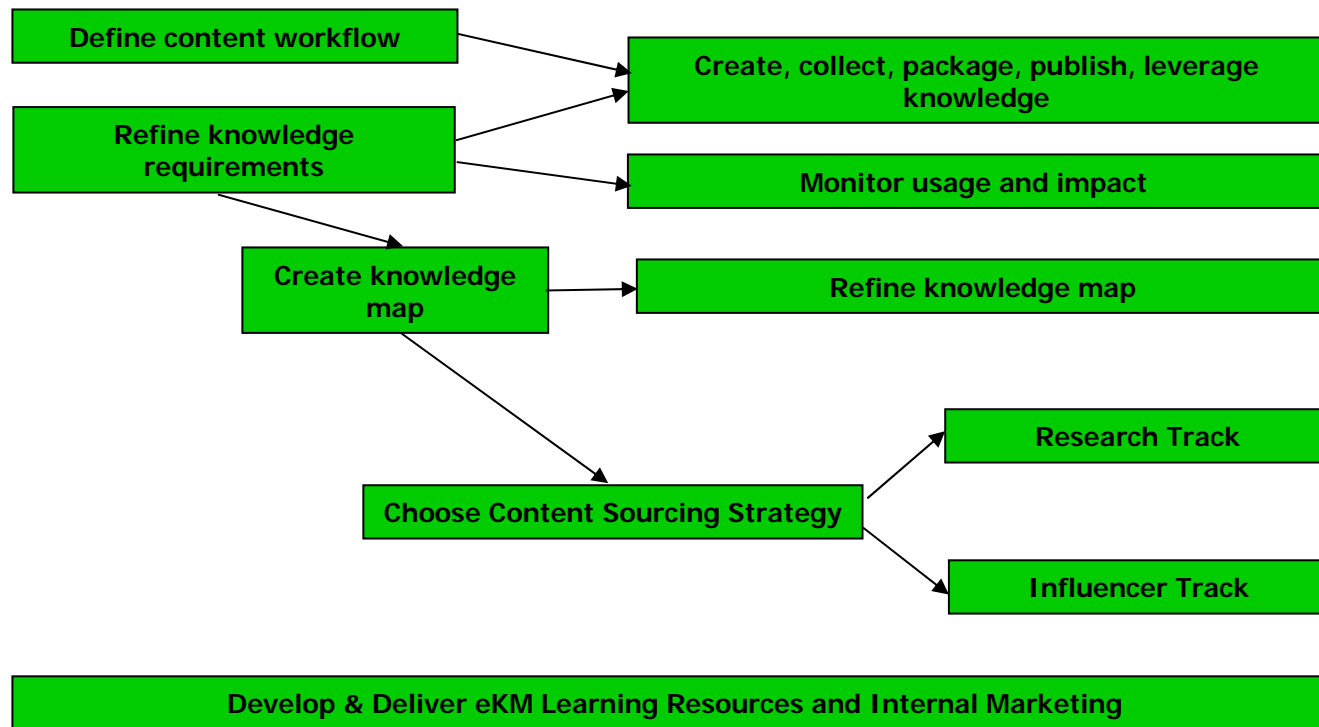

Create the technical architecture

Create the **organizational architecture**

Establish **organizational processes** to keep knowledge flowing in the organization

Time

What KM delivers

- **Productivity**

 - work or goods produced per unit time

 - easiest to measure

- **Quality**

 - improvement in Quality of results and Quality of life

 - harder to measure (by nature, quality is qualitative)

- **Innovation**

 - new ideas, new methods, breakthroughs, solutions where none existed before

 - hardest to measure

Productivity Metrics Examples

- **Decreased time to profile prospects**
- **Decreased time to write proposals**
- **Decreased project start-up time**
- **Decreased time to find product evaluations, citations, etc.**
- **Decreased admin and overhead project time**

Caution! The Productivity Paradox

- **In Professional Services, all other things being equal, increased productivity equals lower revenue**

- **KM delivers productivity; Operations delivers gross margin and profitability**

Quality Metrics Examples

- **Higher proposal acceptance rates**
- **Higher recruit acceptance rates**
- **Faster colleague promotion rates**
- **Earlier 'Breakeven Day' for new and experienced hires**
- **Lower turnover of colleagues**
- **Higher client satisfaction rates**

Innovation Metrics

- **Faster transfer of knowledge from project to project**
- **Creation of 'Innovation Frameworks'**
 - Strategies and Business Models**
 - Technology Architectures**
 - Implementation Guides**
- **Net knowledge contributions**
 - reuse content**
 - producer/consumer ratio**
 - contribution/reuse ratio**

The Knowledge Value Chain Approach

- **Develop a knowledge sharing infrastructure**
- **Understand the sources of value in your organization**
- **Find the knowledge bottlenecks**
- **Make the stakeholders agree on the value in advance**
- **Agree on the metrics in advance**
- **Engineer behavior as well as technology**
- **Communicate your successes**

Enterprise Knowledge Management

What it is and how to do it

Doug Kalish
